

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0022] with the following amended paragraph:

[0022] Fig. 3 shows how another embodiment of a cycle computer may be mounted onto a bicycle handlebar 2. Of course, the same mounting scheme could be used with the cycle computers shown in Figs. 1 and 2. As shown in Fig. 3, the display 14 of the cycle computer 10 is directed towards the cyclist together with the switching elements 16 that operate the cycle computer 10 and/or the lighting device 22. In this embodiment, the lighting device 22 faces forwardly and extends onto the side surfaces of the cycle computer housing 12. This configuration provides forward and lateral illumination around the bicycle to facilitate viewing the road ahead as well as indicating sideways movement of the bicycle, thus improving rider safety. A conduit coupler 21 is disposed on a side surface 20 of a housing 19 of computer 10 for coupling a conduit 17 that contains electrical wiring for switches 18 mounted to handlebar 2.
